

**IN THE UNITED STATES DISTRICT COURT
FOR THE NORTHERN DISTRICT OF ILLINOIS**

DANIEL CATANESE,

Plaintiff,

v.

CARTIVA, INC.,

Defendant

Civil Action No.:

MDL 3172

COMPLAINT IN CIVIL ACTION

COMES NOW Plaintiff, DANIEL CATANESE (“Plaintiff” or “Mr. Catanese”), by counsel, and for his Complaint against Defendant Cartiva, Inc. (“Cartiva”) alleges, and states as follows.

This is a products liability lawsuit involving a defective toe implant device that fails in approximately two-thirds of patients, but which continued to be sold in the U.S. market for nearly a decade until it was recalled on Oct. 31, 2024¹

PARTIES

1. Plaintiff Daniel Catanese is, and at all times relevant to this action was, a citizen and resident of the State of Illinois, with a residence in Yorkville, Illinois (Kendall County).

2. Defendant Cartiva, Inc. is, and at all times relevant to this action, was a corporation with its principal place of business and headquarters located at 6120 Windward Parkway, Suite 220, Alpharetta, Georgia 30005. As a manufacturer of medical devices, Cartiva

¹ See Urgent Medical Device Recall for Cartiva Synthetic Cartilage Implant, available at https://www.stryker.com/content/dam/stryker/foot-and-ankle/resources/CartivaFSN30Oct2024_US.pdf (last visited Nov. 4, 2025).

is, and at all times relevant was, subject to regulations and consensus industry standards governing the medical device industry, including those promulgated by the United States Food and Drug Administration (“FDA”).

3. At all times material hereto, Defendant developed, tested, assembled, manufactured, packaged, labeled, prepared, distributed, marketed, supplied, and/or sold the defective product sold under the name “Cartiva SCI” (Synthetic Cartilage Implant hereinafter referred to as “SCI” or “Defective Device”), either directly or indirectly, to members of the general public within the State of Illinois, including Plaintiff.

4. Defendant’s Defective Device was placed into the stream of interstate commerce and was implanted in Plaintiff’s right big toe on December 29, 2017, at Endeavor Health Elmhurst Hospital in Elmhurst, Illinois, by Kenneth H. Zygmunt, M.D.

5. On October 29, 2019, Plaintiff returned to Endeavor Health Elmhurst Hospital where Dr. Zygmunt injected steroids for pain. This subsidized the pain for about 3-6 months.

6. Plaintiff was evaluated by Dr. Guarav Vajaria, DPM at Edward Elmhurst Health in Plainfield, IL on July 12, 2022 for chronic toe pain. Dr. Vajaria suggested patient’s first metatarsophalangeal joint be surgically fused if the pain continued and the range of motion worsened.

7. On February 21, 2023, Plaintiff returned to Dr. Guarav Vajaria, DPM at Edward Elmhurst Health and complained of pain in the right great toe. Dr. Guarav Vajaria treated Plaintiff’s pain by injecting a mixture of 1cc’s 1% Lidocaine, 1cc’s Dexamethasone Phosphate, and 1cc’s of Kenalog-40.

8. On November 13, 2024 Plaintiff underwent surgery at Northwestern Medicine Valley West Hospital in Sandwich, IL by Thomas Rappette, DPM. Dr. Rappette removed the

failed Cartiva SCI and repaired the bone cyst with DBM bone graft and cancellous bone chips and Autograft bone.

9. Upon removal of the Defective Device, the SCI had shifted laterally and hollowed out Plaintiff's entire lateral aspect of the metatarsal head. Plaintiff's dorsal cortex on his great toe became so thin that it was unstable to place any implant. Dr. Rappette monitored for consolidation to occur in order to replace the primus implant and a shortening osteotomy of the second metatarsal.

10. For the period of about November 2024 to February 2025, Dr. Rappette continued to monitor.

11. On or around February 26, 2025, Plaintiff underwent a third surgery at Northwestern Medical Valley West Hospital in Sandwich, Illinois by Dr. Thomas Rappette, DPM for a Bunionectomy and replacement Primus Implant on his right great toe.

12. As a direct and proximate result of Defendant placing the Defective Product into the stream of commerce, Plaintiff has suffered and continues to suffer both injuries and damages within the State of Illinois, including but not limited to: past, present and future physical and mental pain and suffering, and loss of the ability to enjoy the pleasures of life, and disfigurement; and past, present and future medical, hospital, monitoring, rehabilitative and pharmaceutical expenses and lost wages.

13. Upon information and belief, at all relevant times, Defendant was present and transacted, solicited, and conducted business in the State of Illinois through its employees, agents and/or sales representatives, and derived substantial revenue from such business.

14. Defendant is conclusively presumed to have been doing business in the State of Illinois and is subject to Illinois' long arm jurisdiction.

15. At all relevant times, Defendant expected or should have expected that its acts and omissions would have consequences within the United States and the State of Illinois.

JURISDICTION AND VENUE

16. This Court has original jurisdiction pursuant to diversity jurisdiction prescribed by 28 U.S.C. § 1332 in that the amount of controversy exceeds \$75,000.00, exclusive of costs and interest, and involves citizens of different states.

17. Defendants have submitted to the jurisdiction of this Honorable Court by doing, personally or through agents, at all times material to this lawsuit, the following acts:

- a. Committing tortious acts within this state by selling and delivering defective products, including the Defective Device, to persons, firms, corporations, physicians, or hospitals in this state via its distributors, dealers, wholesalers, retailers and/or brokers. Such products were used by healthcare providers on consumers/patients in the State of Illinois in the ordinary course of trade, commerce or healthcare;
- b. Conducting and engaging in substantial business and other activities in the State of Illinois by selling its products to persons, firms, corporations, physicians, or hospitals in this state via its distributors, dealers, wholesalers, retailers and/or brokers;
- c. Causing injuries to persons in the State of Illinois, including Plaintiff, and likely others. Before, at or about the time of said injuries, the Defendants engaged in solicitation activities in the State of Illinois to promote the sale of its products;
- d. Selling defective products, including the Defective Device, with knowledge or reason to foresee that its product would be shipped in interstate commerce and would reach the market of users or consumers in the State of Illinois.

18. Venue is proper in the U.S. District Court for the Northern District of Illinois because the unlawful actions giving rise to this complaint, and the injuries suffered, occurred

within the district. Furthermore, Plaintiff is a resident of the State of Illinois in the County of Kendall.

GENERAL ALLEGATIONS

19. This lawsuit arises from the Defendant's negligence, choice to manufacture, market, and sell a defective product, and violations of various sections of the Federal Code of Regulations, all of which caused harm to Plaintiff.

20. Big toe arthritis affects about 2.2 million in the United States. As arthritis deteriorates the joint's cartilage, a person develops an extremely painful bone-on-bone painful rubbing of the bones. This condition can be surgically treated with 1) Arthrodesis a/k/a "fusion" or 2) Arthroplasty a/k/a "joint replacement, including, according to the Defendants' representations, a Cartiva® SCI, which is supposed to act like a cushion to prevent the bone-on-bone pain.

A. Cartiva Implant Treatment Option

21. The Cartiva implant is a molded cylindrical implant that is placed into the metatarsal head in the first metatarsophalangeal joint via press-fit implantation using instruments specifically designed for placement of the device.²

22. Defendant touted Cartiva as a simple procedure, which enables surgeons to replace the damaged cartilage with a bullet-sized implant they can place into an intraoperatively created pilot hole in the first metatarsal head.

23. The Cartiva implant was promoted for use in the treatment of patients with painful degenerative or post-traumatic arthritis (hallux limitus or hallux rigidus) in the first

² Home > For Physicians > Implant Procedure(<https://www.cartiva.net>) (<https://www.cartiva.net/for-physicians/>)

metatarsophalangeal joint with or without the presence of mild hallux valgus.

24. The Cartiva instrumentation is used to drill an appropriately sized cavity in the metatarsal head and deploy the Cartiva implant into the prepared cavity.

25. Defendant claims that joint resurfacing with a Cartiva implant is simple, does not require significant removal of healthy tissue, and typically results in nominal surgical trauma and rapid recovery.³

26. Cartilage is a specialized tissue responsible for mediating contact between bones on surfaces with relative movement. Since cartilage is not vascularized, chondrocytes depend mainly on anaerobic metabolism and get their nutrients through diffusion from the synovial fluid into the matrix.

27. Cartilage does not restore itself or recover quickly from injury- e.g. the complete turnover of the human femoral head cartilage would take approximately 400 years.⁴ Joint replacement with polyvinyl alcohol-based hydrogels (PVA), such as the one used in Cartiva is a joint replacement alternative to traditional fusion treatment.

28. The biomechanical design of these implants relies on "hard-on-hard" and "hard-on- soft" interactions. This type of design does not mimic the soft-on-soft interactions that occur in natural cartilage.

29. PVA is biocompatible and has good swelling properties.⁵ But the characteristics of the resulting hydrogel could also be tailored by adjusting the production method or

⁵ Id.

by combining PVA with other materials to produce a more suitable and stable material than the current design.⁶

B. Fusion Treatment Option

30. In contrast to the implantation of a Cartiva, an arthrodesis (hereinafter “fusion”) is a procedure where the phalangeal and metatarsal bones are cut and shaped to fit (fuse) together to relieve toe joint pain.

31. The two bones are then aligned, set at a predetermined angle and permanently fixed with either screws and/or a plate so the two bones “fuse” together permanently. A typical fusion procedure eliminates the ability to move the big toe but eliminates the patient’s pain.

C. A Questionable Study Raises Questions by Insurance Carriers

33. Defendant has a duty to be truthful about the risks of their products in marketing and promotion of the product. Yet, Defendant has suppressed medical industry knowledge from the FDA and public that Cartiva implants have a high failure rate due to migration of the implant caused by implant shrinkage.

34. Defendant obtained Premarket Approval Application (“PMA”) approval for Cartiva as a Class III device, yet the approval was largely based on the “substantial equivalence” of the Cartiva implant performing similarly to the gold standard treatment of fusion. Substantial equivalence is generally used for Class II medical devices and evades a full FDA safety review.

35. The pivotal clinical study (“Motion Study”)⁷ compared the Cartiva implant to

⁶ Id. Ma R, Xiong D, Miao F, Zhang J, Peng Y. Novel PVP/PVA hydrogels for articular cartilage replacement. *Mater Sci Eng C*. 2009;29(6):1979-1983. doi:10.1016/j.msec.2009.03.010; Fathi E, Atyabi N, Imani M, Alinejad Z. Physically crosslinked polyvinyl alcohol-dextran blend xerogels: Morphology and thermal behavior. *Carbohydr Polym*. 2011;84(1):145-152. doi:10.1016/j.carbpol.2010.11.018

⁷ Baumhauer JF, Singh D, Glazebrook M, Blundell C, De Vries G, Le IL, Nielsen D, Pedersen ME, Sakellariou A, Solan M, Wansbrough G, Younger AS, Daniels T; for and on behalf of the CARTIVA Motion Study Group. Prospective, Randomized, Multi-centered Clinical Trial Assessing Safety and Efficacy of a Synthetic

the traditional gold standard fusion treatment. The study was a non-inferiority clinical study of 202 subjects treated at 12 sites in the United Kingdom and Canada. The “Motion Study,” put simply, is a comparison to a fusion procedure. However, the results of the Motion Study have not been replicated in clinical practice and the Cartiva failure rate is much higher.⁸

36. The Motion Study has been widely criticized by industry experts because of its insufficient sample size prompting Cigna to deem the use of the Cartiva implant to treat big toe arthritis “experimental” based upon the lack of sufficient scientific evidence to support the successful treatment claims made by Defendant.⁹

37. In support of its position, Cigna cited a report by Hayes, Inc.¹⁰ which found that individual outcome measures were inconsistent and some suggested better outcomes with arthrodesis. Patients treated with Cartiva SCI reported statistically significantly worse pain scores (i.e., more pain) when compared with the arthrodesis group from six weeks to two years post-procedure. The Hayes report concluded that the very-low-quality body of evidence relied upon by the Defendants was insufficient to draw conclusions regarding the effectiveness and safety of the Cartiva implant for treatment of first MTP joint arthritis. Hayes Inc., noted that substantial uncertainty exists regarding the efficacy and benefit of the Cartiva implant due to a single identified trial, inconsistencies within the individual study results, and lack of long-term comparative effectiveness data. Hayes, Inc., and, in turn, Cigna, concluded that large studies assessing the comparative effectiveness and safety of the Cartiva implant are needed.

Cartilage Implant Versus First Metatarsophalangeal Arthrodesis in Advanced Hallux Rigidus. *Foot Ankle Int.* 2016 May;37(5):457-69. doi: 10.1177/1071100716635560. Epub 2016 Feb 27. PMID: 26922669.

⁹ Partial or total replacement of the first MTP joint or any other foot joint using ANY of the following is considered experimental, investigational or unproven: Page 2 of 12 Medical Coverage Policy: 0446

- _____ceramic implant (e.g., Moje prosthesis [Orthosonics, Ltd., Devon UK])
- _____synthetic cartilage implant (e.g., Cartiva Synthetic Cartilage Implant)

¹⁰ Hayes, Inc. Hayes Health Technology Brief. Cartiva Synthetic Cartilage Implant (Wright Medical Group) for Treatment of First Metatarsophalangeal Joint Arthritis. Hayes, Inc.; March 2019; updated May 2020.

38. The Defendant's Motion Study reported on a prospective, randomized non-inferiority study to compare the efficacy and safety of the Cartiva implant to great toe fusion surgery for advanced-stage hallux rigidus. The study included 152 implants and 50 arthrodesis patients. The three primary study outcomes assessed were pain, function, and safety. There were no cases of implant fragmentation, wear, or bone loss. This study is the basis of the PMA approval for the Cartiva implant.

39. Cigna also recognized that clinical practice guidelines suggest a different implant design is recommended which renders the Cartiva implant unreasonably dangerous by design. Clinical practice guidelines published by the First Metatarsophalangeal Joint Disorders Panel of the American College of Foot and Ankle Surgeons in 2003 states that interposition arthroplasty with double-stem silicone hinged implants is still a useful procedure for the end-stage arthrosis of hallux, and that titanium grommets are recommended to minimize ectopic bone formation and protect the implant from the adjacent bone. In addressing total joint systems, the guideline states that numerous implant systems have been developed during the years and several are still used clinically, although long-term clinical usefulness has yet to be established. Judicious use and strict criteria are recommended to avoid complications and problematic revisions (Vanore, et al., 2003).

40. Outside the U.S., NICE published Interventional Procedure Guidance in 2005 based on analysis of seven case series: Hanyu et al. (2001); Sharnkar, et al., (1991); Cracchiolo et al., (1992); Granberry et al., (1991); Bommireddy et al., (2003); Ibrihim et al., (2004); and Malviya et al., (2004). The guidance also states there is little evidence on the durability of newer implants, and that complications may necessitate removal of the joint. These complications include persistent pain, infection, implant loosening, implant fracture, osteolysis, bone over-

production, cyst formation, silastic granulomas and transfer metatarsalgia.

D. Defendant Suppressed Adverse Data from FDA/Medical Providers

41. On information and belief, Defendant had knowledge at all relevant times of the clinical guidelines and outside studies mentioned herein but have suppressed the medical data and information and failed to update the label, failed to update physicians, and failed to voluntarily recall the defective device.

42. A follow up to the “Motion Study”, Baumhauer et al. (2017) (“Motion II Study”), a study funded by Defendant, retrospectively evaluated the Motion Study finding identical success rates between fusion surgery and the Cartiva implant.

43. These claimed success rates, however, do not exist in clinical practice. Actual patient results have reported failure rates of 64% as opposed to the 13.5% failure rate Defendant reported to the FDA. A 2020 study by Rosas revealed high failure rates of the Cartiva implant in patients with Hallux Rigidus and significant radiologic subsidence with lysis around the implant, erosion of the proximal phalanx countersurface as well as recorded implant wear are harbingers for concern in the long term.¹¹

44. One of the conditions of approval required a post-approval study (“PAS”) that demonstrates no greater than 13.5% complication rate and tracking the number of patients that were converted to arthrodesis (a/k/a fusion) surgery.

45. On July 12, 2019, the FDA approved Defendant’s updated label based upon the findings of the Post-Approval Motion Study to include implant subsidence. However, Defendant incorrectly claimed a majority (76%; 13/17) of the Cartiva serious adverse events were for pain. Additionally, Defendant incorrectly stated in the updated label that 9.2% of

¹¹ Rosas K, Hurley ET, Kennedy JG. Early Failures of Polyvinyl Alcohol Hydrogel Implant for the Treatment of Hallux Rigidus. *Foot & Ankle Orthopaedics*. October 2020. doi:10.1177/2473011420S00414

Cartiva subjects and 12% of fusion subjects had the implant and/or hardware removed during the course of the study. On information and belief, Defendant has misrepresented the failure rates to the FDA by labeling the adverse event as pain rather than implant subsidence.

46. Prior to the implantation of Plaintiff's Cartiva implant, Defendant was aware of higher than reported loss of toe mobility, pain, and high failure rates of the Cartiva implant due to shrinkage including but not limited to over 144 adverse event reports filed with the FDA.

47. To date there are at least 144 adverse event reports in the Maude database with the majority of events attributed to implant loosening or failure. The loosening is likely due to shrinkage of the implant that is well supported by peer-reviewed literature mentioned herein.

48. The Patient Brochure for the Defective Device does not list loss of range of motion of the toe, bone lysis, shrinkage of implant, bone erosion or the inability to walk as a known risk of the Cartiva implant. Plaintiff relied upon the representations made to him in the Patient Brochure, provided to him directly and/or communicated by his healthcare provider, which formed the basis of his decision to use the Cartiva implant.

49. Device migration was underreported as a risk that occurred in 1 out of 152 patients in a two-year clinical study. However, upon information and belief, Defendant's label and patient brochures failed to provide Plaintiff with information relating to the true failure rate due to migration and prevalence of those failures sufficient for him to make an informed decision prior to his surgery.

50. Defendant's label reflects a Cartiva implant failure of 13.5%. However, in view of continual and ongoing reports and studies, the actual rate of failure of the defective Cartiva device is likely 6-7 times higher than Defendant's reported failure rate, which it is believed the Defendants knew of before December 2019.

51. Unfortunately, for patients with Cartiva implant failure, many in the medical community believe that loss of toe range of motion is a symptom of shrinkage (aka implant subsidence), which is a precursor to failure. By any account, the number of Cartiva implant failures is not only exponentially greater than Defendant will admit but the failure rate has reached alarming proportions.

52. However, during the time Defendant has marketed, labeled, and sold the Cartiva implant to Plaintiff, they knew or should have known that the likelihood of patients experiencing implant shrinkage was significantly higher than they reported, and in fact is higher than any comparable product on the market and that pain and discomfort would be a likely consequence of implant shrinkage and migration.

53. The Cartiva implant was touted as a revolution in great toe arthritis therapy. It came out with a splash and the original studies to get the implant through FDA approval showed striking results.

54. Bob Baravarian, DPM, FACFAS, was involved in helping launch Cartiva and educating other surgeons on the proper use of the Cartiva SCI. However, Dr. Baravarian's clinic, University Foot and Ankle Institute, began to see failures due to the implant slipping into the bone, a process referred to as subsidence. Dr. Baravarian and his clinic will no longer use Cartiva, because the failures of Cartiva implants in clinical practice occur more frequently than the results noted in Cartiva's "Motion Study".¹² "Currently, we no longer use the Cartiva implant as a treatment option for first MPJ arthritis as we have found an over 50 percent failure rate in our cases."¹²

55. Dr. Baravarian is not alone in his findings, a retrospective review of 64 Cartiva

¹² <https://www.hmpgloballearningnetwork.com/site/podiatry/examining-obligations-when-implant-procedure-fails-reflections-surgeon>

SCI procedures by Cedars Sinai Medical Center showed a higher level of patient dissatisfaction with implant outcomes than was seen in Cartiva's Motion Study clinical trial. In the Cedars Sinai trial 37.5% of the patients underwent revision surgery at average 20.9 months of follow-up. More importantly, the radiographic loss of MTP (great toe) joint space and progression of arthritis were present for all cases studied. MRI revealed bony channel widening and a smaller implant-evidence of subsidence (a/k/a shrinkage) with peri-implant fluid suggesting instability at the implant-bone interface. Persistent edema was observed in soft tissues and bone.

E. Defendant Issued a Recall of the Cartiva SCI Device

56. As failure rates continued to rise, Defendant issued a recall of the Cartiva SCI device on October 31, 2024 based on reports, including the Rosa study, indicating patients, including Plaintiff, who received a Cartiva SCI implant experienced alarmingly high rates of revision, removal, displacement, pain, or nerve damage than previously disclosed in premarket and post-approval studies.

57. The recall notice instructed healthcare providers to remove and quarantine any remaining Cartiva SCI devices in their inventory and return them to Stryker. It also asked physicians to continue monitoring their patients, and look for new or worsening symptoms including pain, and difficulties walking.

58. A recall is an alternative to a Food and Drug Administration-initiated court action for removing or correcting violative, distributed products by setting forth specific recall procedures for the Food and Drug Administration to monitor recalls and assess the adequacy of a firm's efforts in recall. See 21 CFR § 7.40(a).

59. The Defendant knew or should have known the Cartiva SCI should have been recalled long before October 31, 2024, in violation of federal regulations including making an

adulterated device that proximately and directly caused Plaintiff's injuries and damages.

F. Degradation of Cartiva (PVA Gel Implant)

60. The Cartiva implant is a Polyvinyl membrane gel implant. Cartiva implants have had degradation of the PVA membrane noted in the Rosas study with findings of loosening, marring and deformity of implant.

61. Upon information and belief, Plaintiff's Cartiva implant had loosening of the implant due to shrinkage, marring and deformity of the implant caused by PVA degradation which directly and proximately caused implant failure, subsequent multiple surgeries, pain, loss of mobility and bone.

62. The PVA degradation is not an anticipated or intended outcome of the manufacture of the Cartiva implant.

63. The PVA degradation is a mechanical defect that rendered the Cartiva implant inserted in the Plaintiff defective and unreasonably dangerous.

64. The importance of *swelling behavior* is connected to the mechanical and tribological properties of the Cartiva SCI hydrogel, as well as how swelling behavior impacts the risk of implant failure. In 2007, PVA hydrogels were used for treatment of knee cartilage defects in adult rabbits. Results revealed growth over the implant and implant shrinkage.¹³ Gels can react to osmotic gradients and swell and de-swell accordingly, even in hydrated conditions. This volume change may induce detachment from the tissue or implant and interfacial debonding.¹⁴

¹³ Maher SA, Doty SB, Torzilli PA, et al. Nondegradable hydrogels for the treatment of focal cartilage defects. J Biomed Mater Res - Part A. 2007;83(1):145-155. doi:10.1002/jbm.a.31255

¹⁴ Carolina Borges, Rogério Colaço & Ana Paula Serro (2019) Poly(vinyl alcohol)-based hydrogels for joint prosthesis, Annals of Medicine, 51:sup1, 105, DOI: 10.1080/07853890.2018.156271

65. Since Cartiva implants are composed of PVA which is soluble in water, crosslinking is a crucial step for PVA gel formation. Without a stable structure, the gel is not able to withstand the swelling pressure upon fluid intake and may dissolve.¹⁵

66. Cartiva is a proprietary PVA-based hydrogel, and its production consists of successive freeze-thawing cycles.

67. The Cartiva implant is a PVA based hydrogel. PVA hydrogels are problematic because the method of manufacturing may result in 1) air bubbles, 2) PVA clumping, 3) fragility of the PVA hydrogel, 4) improper binding of crystallites, 5) disintegration and 6) striation.

¹⁵ Peppas NA. Hydrogels in Medicine and Pharmacy. Boca Raton: CRC Press; 1989

Partially disintegrated Freeze Thawed PVA gel

Striations on gel caused by rapid cooling and oxygenation of pre gel solution

Effects of vacuum on gelation of PVA cause air bubbles to be trapped inside hydrogel

Semi-irreversible contracture of thick PVA hydrogel

68. Manufacturing methods are more problematic for thicker gels like the Cartiva implant. Thicker gels are prone to a lot more variation, and small tweaks in temperature and aeration can contribute to these variations. Consistent temperature and aerations are much harder to produce on a larger scale in a manufacturing environment.

69. The violations of federal regulations, including but not limited to making an adulterated device because the manufacture of the defective device failed to meet established performance standards, or if the methods, facilities or controls used for its manufacture, packing, storage or installation are not in conformity with federal requirements proximately and directly caused Plaintiff's injuries and damages. See 21. U.S.C. §351.

G. Produce Representations

70. Defendant's label and patient brochure failed to provide accurate substantive or quantitative prevalence rates of failure or other adverse effects to Plaintiff prior to his surgery.

71. Defendant has represented in patient marketing literature that Cartiva is a quick 35-minute procedure where your physician replaces the damaged cartilage in your big toe with a new synthetic cartilage that behaves like the natural cartilage of your big toe joint.

72. Defendant additionally told patients, including Plaintiff that "movement matters" further stating in marketing materials - "Your big toe joint is uniquely designed for movement and provides most of the force needed for walking and running. Unlike fusion surgery, which locks the joint in place, CARTIVA Synthetic Cartilage Implant (SCI) reduces pain while also allowing your joint to move how it's supposed to."

73. In addition to promises about the increased toe mobility and function, Defendant alleges in marketing that the Cartiva implant is proven to provide *long-term pain reduction and increased foot mobility*, with *97% reduction in pain* demonstrated at almost six years post-

procedure. These statements exceed the scope of the FDA approved label.

74. Plaintiff was induced to purchase/use a Cartiva implant based on the Defendant's representations about the safety and efficacy of the product. Furthermore, Plaintiff has endured medical expenses, loss of income, and pain and suffering based upon his reliance on Defendant's product representations and will continue to have future expenses to repair the bodily harm caused by the defective Cartiva implant.

75. Defendant's labeling was false and/or misleading. Defendant violated the federal regulations in the labeling of Plaintiff's Cartiva implant thereby causing a misbranded medical device to be ultimately implanted into Plaintiff's body.

76. The conditional approval letter relating to the Cartiva implant stated: "CDRH does not evaluate information related to contract liability warranties, however you should be aware that any such warranty statements must be truthful, accurate, and not misleading, and must be consistent with applicable Federal and State laws".

77. Failure to comply with the conditions of approval invalidates this approval order.

78. Commercial distribution of a device that is not in compliance with these conditions is a violation of the Food, Drug and Cosmetic Act. 21 U.S.C. §§ 301 et seq.

79. Defendant violated the conditional approval requirements and consequently the federal regulations in, among other things, making untrue, inaccurate and/or misleading statements regarding Plaintiff's Cartiva implant. If Defendant had not made these statements and violated the requirements and regulations, Plaintiff would have chosen an alternative treatment option or a different device for implantation into his body.

H. Defendant Failed to Comply with PMA Post-Approval Surveillance Study

80. The PMA approval order of the Cartiva implant required Defendant to collect

data to assess the following primary and secondary study endpoints:

- a. **Primary Study Endpoints-** The primary endpoint will evaluate the long-term safety of the Cartiva implant by demonstrating the following:
 - i. Durability of the implant over the longer term.
 - ii. Assessment of no unanticipated safety concerns that arise after Month 24 up to 5 years.

Addressed by:

1. determining the incidence of serious device-related adverse events per year and overall, from Month 24 to Year 5; and
 2. summarizing device-related radiographic major complications over time from Month 24 to Year 5.
- b. Provide the following **secondary endpoints**:
 - i. Evaluation of maintenance of range of motion;
 - ii. Wear characteristics or device degradation for any Cartiva implant removed;
 - iii. Pain and function over time (Visual Analog Scale [VAS] pain scores, Foot and Ankle Ability Measure [FAAM] Activities of Daily Living [ADL] function scores and FAAM Sports function scores); and,
 - iv. Evaluation of radiographic findings (radiolucency, bony reactions, and heterotopic ossification) looking at presence or progression from 24 months to 5+ years as well as correlation

with the 5+ years clinical outcomes (effectiveness and safety).

81. In addition to *not* following the PMA post-approval orders, Defendant has largely ignored the endpoints the FDA placed in the PMA to protect public safety. The safety data the FDA established did not narrow the Defendant's focus to the Motion study participants. Yet, Defendant has violated the FDA's PMA order by not assessing the safety of each endpoint for each device with reported adverse events, including the Plaintiff's defective device.

82. The lack of safety surveillance served to suppress information from the FDA in violation of the PMA order and the lack of safety surveillance makes the product unreasonably dangerous to end consumers, including Plaintiff.

83. Defendant failed to develop practices and procedures to assure compliance with 21 C.F.R. §814 concerning device modifications, instructions for use, pre-market approval conditions; and to comply with 21 C.F.R. §§803, 806 and 820, concerning maintaining MDRs, implementing device Removals and Corrections and establishing Quality Systems.

84. Defendant failed to develop practices and procedures to assure compliance with the federal requirements for reporting adverse events, or MDRs, in accordance with 21 U.S.C. §360.

85. Despite the obligations described above, and the obligations of every medical device manufacturer to comply with federal law, Defendant failed to meet numerous federal requirements in its manufacture and sale of the Cartiva implant prior to Plaintiff's surgery and implantation of his Cartiva device which caused him to have implanted a defective and adulterated device causing his injuries and damages.

86. Defendant's failure to meet the specific federal requirements outlined above which are applicable to Plaintiff's Cartiva implant, directly and proximately caused Plaintiff's

Cartiva implant to be defective and proximately caused harm and injury to Plaintiff.

87. The causes of action set forth in this complaint are not preempted by § 360k, because the violations alleged are all based on an exclusively federal statutory and regulatory standard of care which includes no “requirement, which is different from, or in addition to, any requirement applicable under” the Food, Drug and Cosmetic Act and regulations promulgated thereunder. As such, the claims set forth in this cause of action contain requirements that are parallel to the Food, Drug and Cosmetic Act and regulations promulgated thereunder.

I. Defendant’s Corporate Facts

88. Prior to obtaining FDA approval, Cartiva Inc, raised revenue on July 24, 2013 with an equity funding by offering a round of Regulation D security offerings totaling Four Million Three Hundred Twelve Thousand and Seven Hundred Twelve Dollars (\$4,312,712.00).

89. Three years later on July 1, 2016 Cartiva, Inc. obtained premarket approval of the Cartiva SCI.

90. On or about October 10, 2018, Wright Medical Group purchased Cartiva, Inc. for Four Hundred Thirty-Five Million Dollars (\$435,000,000). Stock analysts considered it a hefty price tag but also were impressed with strong early adoption of Cartiva SCI, which offers an alternative to fusion surgery which is the gold standard for treating severe arthritis in the big toe.

91. Despite the initial excitement at product launch, stock analysts quickly caught wind of the reports of Cartiva implant failure. By July 2019, RBC stock analysts found some surgeons were implanting fewer of the devices or they had even stopped offering the treatment altogether. Problems with post-operative pain, degree of motion, or the device slipping into the bone in a process known as subsidence (“shrinkage”) were reported. Doctors have been unable

to replicate the positive results of the company's Motion clinical trial in the broader patient population and have stopped implanting the device or are more cautious about using it. Despite analyst concerns that physicians were dropping offering Cartiva SCI to patients due to failed implants, Wright Medical Group CEO Bob Palmisano remained upbeat on prospects for Cartiva.

92. On the company's earnings call in May 2019, Palmisano said sales growth for the device was exceeding expectations, and he identified the market for treatment of big toe arthritis as a \$400 million opportunity.

93. The failure rates of Cartiva SCI were much higher in clinical practice than reported in the Motion Study. Wright Medical Group CEO Bob Palmisano confirmed Cartiva sales in the second quarter of 2019 fell short of Wright's expectations while touting Wright still maintained gross profit margins of 79%. Palmisano further commented,

"The unexpected weakness in our U.S. lower extremities business was due to a combination of factors, including the significant reduction in sales by the Cartiva distributors and disappointing performance in our core foot products driven by a higher-than-normal level of sales rep turnover that occurred in a concentrated period of time mid-quarter. To address this, we acted quickly and terminated the Cartiva distributors, and as of August 1, the U.S. Cartiva business has been transitioned to our direct U.S. lower extremities sales force. **We also adjusted the sales compensation program for our entire U.S. lower extremities sales team and are increasing the size of the sales force and aggressively adding experienced reps. We are confident that the actions we have taken will improve the growth rates of Cartiva** and the whole U.S. lower extremities business; however it will take some time for the benefits of these actions to be evident in the sales results, and we believe our updated guidance takes that timing appropriately into account."

94. Stryker, B.V., a wholly owned subsidiary of Stryker, purchased Wright Medical Group on or about November 11, 2020 for Four Billion Seven Hundred Thousand Dollars

(\$4,700,000,000.00).¹⁶

95. The basis of the “Motion Study” that helped Cartiva gain FDA approval was premised upon a claim that there was a less than 10% failure of the Cartiva implant group that would require subsequent conversion to fusion surgery within the first two years of the implant.¹⁷

96. Defendant alleged the Cartiva implant was determined to be statistically equivalent to arthrodesis (fusion surgery) but with the added benefit of greater mobility and less surgical downtime.

97. Initial results for the Cartiva implant were encouraging, however, unbiased reviewers adopted the position that more independent, non-industry funded research is necessary with larger cohorts to identify implant survivorship and long-term efficacy¹⁸ - something the FDA had already required the Defendant to do in the PMA approval order.

98. Since 2016, Defendant, Stryker f/k/a Cartiva has manufactured, introduced and/or delivered the Cartiva SCI into the stream of interstate commerce in clear violation of the PMA order issued by the FDA.

99. Before commercially distributing the Cartiva SCI in the United States, federal law required Defendant, Stryker f/k/a Cartiva, Inc. to submit an application for premarket approval (“PMA”) of the device to the Secretary of Health and Human Services. On July 1, 2016, the Food and Drug Administration (“FDA”) completed its review of Defendant, Cartiva,

Prospective, Randomized, Multi-centered Clinical Trial Assessing Safety and Efficacy of a Synthetic Cartilage Implant Versus First Metatarsophalangeal Arthrodesis in Advanced Hallux Rigidus. *Foot Ankle Int.* 2016 May;37(5):457-69. doi: 10.1177/1071100716635560. Epub 2016 Feb 27. PMID: 26922669

¹⁸ <https://www.ncbi.nlm.nih.gov/pmc/articles/PMC7067982/pdf/main.pdf>

Inc.'s PMA application for the Cartiva implant.

100. Based on the materials submitted by Defendant, Stryker f/k/a Cartiva, the FDA conditionally approved the Cartiva implant for commercial distribution.¹⁹ The conditional approval letter from the FDA stated that “[c]ommercial distribution of a device that is not in compliance with these conditions is a violation of the [Food, Drug and Cosmetic] act, [21 U.S.C. §§301, et seq.].”

J. Plaintiff’s Cartiva Implant

101. On or about December 29, 2017, Kenneth H. Zygmunt, DPM performed surgery on Plaintiff whereby the Defective Product was implanted in his great toe.

102. This surgical procedure has not been effective at alleviating pain or restoring range of motion.

103. As a result of the implantation of the Defective Device, Plaintiff has suffered additional medical expenses for removal of the implant, subsequent surgery to "fuse" his big toe bones together, a bone graft, and an additional implant, all of which was needed to correct the toe deformity and bone loss caused by the Defective Device, and causing additional loss of income, and pain and suffering.

104. Plaintiff pleads that the discovery rule should be applied to toll the running of the statute of limitations until Plaintiff knew, or through the exercise of reasonable care and diligence should have known, of facts indicating that the Plaintiff had been injured, the cause of the injury and the tortuous nature of the wrongdoing that caused the injury.

105. Plaintiff’s discovery of Cartiva defects is premised on Defendant’s communications with physicians, sales representatives and/or distributors and the FDA that

¹⁹ PMA # P150017

failures of a successful Cartiva implant were due to surgical technique and not the implant.

106. Despite diligent investigation by Plaintiff into the cause of his injuries, including consultations with Plaintiff's medical providers, the nature of Plaintiff's injuries and damages and their relation to the Plaintiff's Cartiva and Defendants' wrongful conduct was delayed and could not have been discovered, until a date within the applicable statute of limitations for filing each of Plaintiff's claims.

107. Any applicable statutes of limitations have been tolled by the knowing and active concealment and denial of material facts known by the Defendant when it had a duty to disclose those facts. The Defendant's purposeful and fraudulent acts of concealment have kept Plaintiff ignorant of vital information essential to the pursuit of Plaintiff's claims, without any fault or lack of diligence on Plaintiff's part, for the purpose of obtaining delay on Plaintiff's filing of their causes of action. The Defendant's fraudulent concealment did result in such delay.

108. Defendant is estopped from relying on the statute of limitations defense because Defendant failed to timely disclose, among other things, facts evidencing the defective and unreasonably dangerous nature of their Cartiva implants.

COUNT I
STRICT PRODUCTS LIABILITY
DESIGN, MANUFACTURE AND FAILURE TO WARN

109. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

110. The Cartiva SCI device implanted in Plaintiff was designed and/or manufactured in violation of the Federal Food, Drug and Cosmetic Act ("Act") and regulations promulgated pursuant to it, including but not limited to improper workmanship and errors at the point of manufacture which caused defects in the Cartiva implants that occurred in the manufacturing

process.

111. These defects caused Plaintiff's Cartiva implants to shrink and migrate from the initial implant site causing pain, loss of mobility and bone loss due to the defective product.

112. At the time the Cartiva implant was placed inside Plaintiff's body, the Defective Device was unreasonably dangerous due to non-compliance by the Defendant of the regulations promulgated pursuant to it in one or more of the following ways:

- a. Failed to accurately establish the in vivo life expectancy of the Cartiva SCI, in violation of 21 C.F.R. 820.30(f). There have been reports of synthetic cartilage implant failure with ballooning osteolytic cyst formation throughout the first metatarsal head.²⁰ There was a large degree of reactive tissue around the hydrogel implant. The implant was grossly loose. The implant demonstrated pitting and wear;
- b. Failed to validate the anticipated wear of the Cartiva SCI prior to its release into commercial distribution, in violation of 21 C.F.R. 820.30(g). Despite peer-reviewed literature backed by radiological evidence that Cartiva does not perform as expected long-term as seen in the Rosas and Fogelman studies, Defendants have not reported these findings to the FDA or undertaken any similar study;
- c. Failed to establish and maintain appropriate reliability assurance testing to validate the Cartiva design both before and after its entry into the marketplace, in violation of 21 C.F.R. 820.30 (g);
- d. Failed to conduct adequate bio-compatibility studies to determine the Cartiva implant's propensity to migrate from the joint space. Radiologic evidence of implant shrinkage is evident in peer-reviewed literature, but Defendant has not undertaken studies to analyze the implant shrinkage when exposed to deep matrix bone;
- e. Failed to identify the component discrepancy, in violation

²⁰ Fogleman J, Robles A, Hollyfield J, Whitlow S, Lundeen GA. Failed Hydrogel Synthetic Cartilage Implant With Osteolytic Cyst Formation in the First Metatarsophalangeal Joint. *Foot & Ankle Orthopaedics*. July 2020. doi:10.1177/2473011420934384

of 21 C.F.R. 820.80(c);

- f. Failed to capture the component discrepancy or defect during their Final Acceptance Activities, in violation of 21 C.F.R. 820.80(d);
- g. Failed to establish and maintain procedures for implementing corrective and preventative action in response to, *inter alia*, complaints regarding the Cartiva and other quality problems associated with the Cartiva, in violation of 21 C.F.R. 820.100;
- h. Failed to appropriately respond to adverse incident reports that strongly indicated the Cartiva implant was malfunctioning [as defined in 21 C.F.R. 803.3], or otherwise not responding to its Design Objection Intent, in violation of 21 C.F.R. 820.198. Physician complaints report failure rates of 50-64% with Cartiva implants and Defendant has largely ignored the clinical evidence by not adequately responding to adverse incident reports or initiating a voluntary recall;
- i. Failed to conduct complete device investigations on returned Cartiva implants and components in violation of 21 C.F.R. 820.198. Defendant has failed to investigate and analyze Cartiva implant failures; and/or,
- j. Continued to inject Cartiva implants into the stream of interstate commerce when Defendant knew, or should have known, that the Cartiva implants were Malfunctioning [as defined in 21 C.F.R. 803.3] or otherwise not responding to its Design Objective Intent. Multiple press releases by Wright Medical Group demonstrate an awareness of high Cartiva failure rates coupled with physicians ceasing to use Cartiva, but Defendant responded to these failures by increasing sales commissions and aggressive sales strategies describing the sales as a “knife fight”.

113. As a direct and proximate result of Defendant’s violations of one or more of these federal statutory and regulatory standards of care, the Cartiva implant implanted in Plaintiff failed and such failure directly caused and/or contributed to the severe and permanent injuries sustained and endured by Plaintiff as defined in 21 C.F.R. 803.3.

114. As a direct result, Plaintiff endured pain and suffering, including, but not limited to failure of the Cartiva implant, migration of the implant with swelling and pain, bone loss, loss of mobility which will require additional fusion surgeries and she has incurred significant medical expenses in the past and will incur additional medical expenses in the future; physical pain and suffering, both past and future; mental anguish and emotional distress, both past and future, including, but not limited to, annoyance and aggravation.

115. This cause of action is based entirely on the contention that Defendant violated federal safety statutes and regulations. Plaintiff does not bring the underlying action as an implied statutory cause of action, but rather she is pursuing parallel state common law claims based upon Defendant's violations of the applicable federal regulations.

116. The cause of action set forth in this Claim for Relief is not preempted by 21 U.S.C. §306(k) because the violations alleged are all based on an exclusively federal statutory and regulatory set of requirements which include no "requirement, which is different from, or in addition to, any requirement applicable under" the Act and regulations promulgated thereunder.²¹ As such, the claims set forth herein contain requirements that are parallel to the Act and regulations promulgated thereunder and not preempted.

117. As a direct and proximate result of Defendant's aforementioned actions, Plaintiff prays for judgment against Defendant in an amount in excess of Seventy- Five Thousand Dollars (\$75,000.00).

118. As a direct and proximate result of Defendant's violations of one or more of these federal statutory and regulatory standards of care, the Defective Device implanted in

²¹ "We concluded that federal manufacturing and labeling requirements applicable across the board to almost all medical devices did not pre-empt the common-law claims of negligence and strict liability at issue in *Lohr. Riegel v. Medtronic, Inc.*, 552 U.S. 312, 322 (2008).

Plaintiff failed and such failure directly caused and/or contributed to the severe and permanent injuries sustained and endured by Plaintiff as defined in 21 C.F.R. 803.3.

119. As a direct result, Plaintiff endured pain and suffering, including, but not limited to implant failure, scarring and disfigurement and has required additional and debilitating surgeries and has incurred significant medical expenses in the past and will incur additional medical expenses in the future; physical pain and suffering, both past and future; mental anguish and emotional distress, both past and future, including, but not limited to, annoyance and aggravation.

120. This cause of action is based entirely on the contention that Defendant violated federal safety statutes and regulations. Plaintiff did not bring the underlying action as an implied statutory cause of action, but rather they are pursuing parallel state common law claims based upon Defendant's violations of the applicable federal regulations.

121. Under Illinois law, Defendant's violations of the aforementioned federal statutes and regulations establish a prima facie case of negligence.

122. Plaintiff alleges that at the time the subject components were in Defendant's control, (i) one or more were defective because they deviated in a material way from the manufacturers or designer's specifications, (ii) such defective condition rendered them unreasonably dangerous to the user, and (iii) such condition proximately caused the damages for which recovery is sought herein.

123. Alternatively, Plaintiff alleges that at the time the subject components were in Defendant's control, (i) one or more were designed in a defective manner, (ii) such defective condition rendered them unreasonably dangerous to the user, and (iii) such condition proximately caused the damages for which recovery is sought herein. Further, (i) Defendant

knew, or given reasonably available knowledge or in the exercise of reasonable care should have known, about the danger for which recovery is sought herein, and (ii) the Cartiva SCI collectively failed to function as expected and there existed a feasible design alternative that would have to a reasonable probability have prevented the harm and injury which occurred to Plaintiff.

COUNT II
**NEGLIGENCE -DESIGN, MANUFACTURE, MISBRANDED AND IMPROPER
TRANSFER OF 510K/PMA WITHOUT FDA APPROVAL**

124. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

125. Plaintiff is in the class of persons that Defendant should reasonably foresee as being subject to the harm caused by defectively designed Cartiva implants insofar as Plaintiff was the type of person for whom Cartiva implant was intended to be used.

126. At all times herein mentioned, Defendant created, designed, researched, manufactured, tested, advertised, promoted, marketed, sold, and/or distributed its Cartiva implant as hereinabove described that was used by the Plaintiff.

127. Defendant could reasonably have foreseen that its Cartiva were expected to and did reach the usual consumers, handlers, and persons coming into contact with said product without substantial change in the condition in which they were produced, manufactured, sold, distributed and marketed by Defendant.

128. The Defective Device implanted in Plaintiff was a class III device while the instruments used to insert Cartiva implants are all Class II devices designed and/or manufactured by Defendant and placed into the interstate stream of commerce.

129. Defendant marketed, distributed and/or permitted use of its Cartiva implants in

violation of the Act and regulations promulgated to it.

130. It was the duty of the Defendant to comply with the Act, and the regulations promulgated pursuant to it, yet, notwithstanding this duty, Defendant violated the Act in one or more of the following ways:

- a. Failed to accurately establish the in vivo life expectancy of the Cartiva, in violation of 21 C.F.R. 820.30(f);
- b. Failed to accurately validate the anticipated wear of the Cartiva SCI prior to its release into commercial distribution, in violation of 21 C.F.R. 820.30(g) and the PMA approval order for Cartiva;
- c. Failed to establish and maintain appropriate reliability assurance testing to validate the Cartiva SCI design both before and after its entry into the marketplace, in violation of 21 C.F.R. 820.30 (g) and the PMA approval order for Cartiva;
- d. Failed to conduct adequate bio-compatibility studies to determine the Cartiva SCI's latent propensity to loosen, migrate into bone and failure to integrate into the joint space as required by the PMA approval order for Cartiva;
- e. Failed to identify the component discrepancy, in violation of 21 C.F.R. 820.80(c);
- f. Failed to capture the component discrepancy or defect during their Final Acceptance Activities, in violation of 21 C.F.R. 820.80(d) and as required by the PMA approval for Cartiva;
- g. Failed to establish and maintain procedures for implementing corrective and preventative action in response to, inter alia, complaints regarding the Cartiva SCI, returned Cartiva SCI, and other quality problems associated with the Cartiva SCI, in violation of 21 C.F.R. 820.100 and the PMA approval order for Cartiva;
- h. Failed to appropriately respond to adverse incident reports that strongly indicated the Cartiva implant was Malfunctioning [as defined in 21 C.F.R. 803.3], or otherwise not responding to its Design Objection Intent,

in violation of 21 C.F.R. 820.198 and the PMA approval order for Cartiva; Failed to conduct complete device investigations on returned Cartiva implants and components, in violation of 21 C.F.R. 820.198 and the PMA approval order for Cartiva; and/or,

- i. Failed to comply with the FDA policies and procedures to transfer ownership of the 510k and/or PMA. Without proper transfer of ownership pursuant to FDA requirements it is not certain the Cartiva device is within the PMA issued for Cartiva, Inc. which means preemption is a non-issue for an unregulated manufacturer.

131. The Cartiva implant and accompanying instruments have been owned by three corporations: Cartiva, Inc. (2015-2017), Wright Medical Group (2018-2020) and Stryker (2020-present), yet the 510k for instruments and the Cartiva implant is still listed with the FDA as Cartiva, Inc. with no PMA Supplement approving new manufacturing sites with ownership changes which implies the FDA has not reviewed or approved ownership of the 510k transfer.

132. **FDA TIMELINE:**

Date	FDA Action	Approval Number
7/1/16	PMA Approval	P150017
8/25/16	PMA Supplement-Change vendor of foil lidstock used to seal primary packaging of Cartiva SCI device	S001
9/29/16	PMA Supplement-Approval of protocol for ODE lead PMA Post Approval Study	S002
11/1/16	PMA Supplement-Approval of 8- and 20-unit shipping configurations for smaller orders	S003
1/6/17	PMA Supplement-Change in supplier of a component used in manufacture of Cartiva SCI	S004

Date	FDA Action	Approval Number
3/1/17	PMA Supplement/Label Change- Modifications to Surgical implantation Technique Guide	S005
11/9/17	PMA Supplement-Expansion of Manufacturing facility	S006
1/29/18	Cartiva Instruments Reclassified as Class II device	Q180170
8/28/18	PMA Supplement-Approval of manufacturing site for instruments to Arcamed LLC	S007
7/2/18	PMA Supplement-Approval of an alternate raw material provider	S008
7/2/18	PMA Supplement-Add additional clean room for manufacture of Cartiva	S009
7/11/19	PMA Supplement-Approval of addition of 6 mm and 12 mm sizes of Cartiva SCI to the previously approved 8 mm and 10 mm device	S010
7/12/19	PMA Supplement/Label change based on findings of PAS	S011
3/22/19	PMA Supplement-Approval to add clarifying statement regarding need for irrigation during drilling within Instructions for Use and the Surgical Implantation Technique for Cartiva	S012
2/9/20	PMA Supplement- add manufacturing site at Steris Synergy Health in Saxonburg, PA	S013
11/26/19	PMA Supplement-Expanded release criteria of final finished device to accept those that have a homogenously opaque appearance	S014

133. The FDA does permit 510(k) transfers with the caveat that two companies may not manufacture the same device under a single 510(k) clearance. Therefore, if a 510(k) holder

wishes to license the right to manufacture a device but also wishes to continue its own manufacturing activity, the FDA's policy is to require the licensee to obtain a new 510(k) clearance.

134. When the holder of an approved PMA enters into an agreement to permit another firm to manufacture and distribute a device under the licensee's private label, FDA approval may be obtained by either of two procedures: (i) the PMA holder may submit a supplement to the approved PMA; or (ii) the licensee may submit an original PMA that includes, or includes by authorized reference to the holder's approved PMA, all appropriate information required by 21 C.F.R. § 814.20 (required information for PMA applications). There is no evidence on the FDA medical device database that the Defective Device implanted in Plaintiff was manufactured or marketed with FDA approval for the new owners of Cartiva.

135. As a direct and proximate result of Defendant's violations of one or more of these federal statutory and regulatory standards of care, the Cartiva implant was used on the Plaintiff and failed and such failure directly caused and/or contributed to the severe and permanent injuries sustained and endured by Plaintiff, as defined in 21 C.F.R. 803.3. As a direct result, Plaintiff endured pain and suffering, including, but not limited to the scarring and disfigurement, and has required additional and debilitating surgery and has incurred significant medical expenses in the past and will incur additional surgery and medical expenses in the future; physical pain and suffering, both past and future; mental anguish and emotional distress, both past and future, including, but not limited to, annoyance and aggravation.

136. This cause of action is based entirely on the contention that Defendant violated federal safety statutes and regulations. Plaintiff did not bring the underlying action as an implied statutory cause of action, but rather they are pursuing parallel state common law claims based

upon Defendant's violations of the applicable federal regulations.

137. Under Illinois law, Defendant's violations of the aforementioned federal statutes and regulations establish a *prima facie* case of negligence.

138. Thus, under Illinois law, a money damages remedy exists for violation of the Act and regulations promulgated thereunder which results in an unreasonably dangerous product proximately causing injuries, and there is no need for the Illinois Legislature to act in order to create such a remedy.

139. The cause of action set forth in this Claim for Relief is not preempted by 21 U.S.C. §306(k) because the violations alleged are all based on an exclusively federal statutory and regulatory set of requirements which include no "requirement, which is different from, or in addition to, any requirement applicable under" the Act and regulations promulgated thereunder. As such, the claims set forth herein contain requirements that are parallel to the Act and regulations promulgated thereunder and not preempted.²²

140. Defendant created, designed, researched, manufactured, tested, advertised, promoted, marketed, sold and distributed a defective product which created an unreasonable risk to the health of consumers and to Plaintiff, in particular, and Defendant is therefore liable for the injuries sustained by the Plaintiff.

141. As a direct and proximate result of Defendant's aforementioned actions, Plaintiff prays for judgment against Defendant in an amount in excess of Seventy-Five Thousand Dollars (\$75,000.00).

COUNT III
MISBRANDED AND ADULTERATED DEVICE

²² In *Riegel*, the Court noted that § 360k "does not prevent a State from providing a damages remedy for claims premised on a violation of FDA regulations; the state duties in such a case 'parallel,' rather than add to federal requirements." 552 U.S. at 330 (2008).

142. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

143. Plaintiff has endured painful surgeries scarring and nerve damage caused by the defective Cartiva implants. The original Cartiva implant was a Class III device, and all instruments used to insert the Cartiva implant are Class II devices designed and/or manufactured by Defendant and placed into the interstate stream of commerce.

144. Defendant marketed, distributed and/or permitted use of its Cartiva implant and insertion instruments in violation of the Act and regulations promulgated to it.

145. It was the duty of Defendant to comply with the Act, and the regulations promulgated pursuant to it, yet, notwithstanding this duty, Defendant violated the Act in one or more of the following ways:

- a. Failed to submit a PMA supplement to warn of risk of implant shrinkage, migration and bone loss for review and approval as required by the FDA. 21 C.F.R. §814.39 and PMA approval order for Cartiva. Despite Defendant's knowledge of higher failure rates than previously reported to the FDA, Defendant chose to do nothing. It is the Defendant, not the FDA, who had a duty to report the failure rates and manufacturing problems to the FDA. The burden for determining whether a supplement is required is primarily on the PMA holder, changes for which an applicant shall submit a PMA supplement include, but are not limited to, the following types of changes if they affect the safety or effectiveness of the device:
 - i. New indications for use of the device.
 - ii. Labeling changes.
 - iii. The use of a different facility or establishment to manufacture, process, or package the device.
 - iv. Changes in sterilization procedures.
 - v. Changes in packaging.

- vi. Changes in the performance or design specifications, circuits, components, ingredients, principle of operation, or physical layout of the device.
- b. Defendant sold, distributed and permitted use of its devices in violation of the regulations prescribed under 21 U.S.C. §360j(e) and 21 U.S.C. § 352(q) which required design validation and manufacturing controls to assure the Defendant would not produce a medical device with impurities or inconsistencies. Defendant also had a duty to provide a label that was truthful about the risks associated with the Cartiva implant and Defendant has failed to do so;
- c. Failed to restrict the use of the Cartiva implant and instruments in violation of 21 U.S.C. §352(r) and the PMA approval order for Cartiva. The Cartiva PMA approval order provided the device is further restricted under section 515(d)(1)(B)(ii) of the act insofar as the labeling must specify the specific training or experience practitioners need in order to use the device. In direct violation of the PMA order, Defendant's Direction For Use merely states "The Cartiva SCI device should only be used by experienced surgeons who have undergone training in the use of this device". There is no limitation on the physician experience-specialty type, years of experience nor do the instructions provide any details about the type of training required. The PMA approval order further states the FDA has determined that these restrictions on sale and distribution are necessary to provide reasonable assurance of the safety and effectiveness of the device. Your device is therefore a restricted device subject to the requirements in sections 502(q) and (r) of the act, in addition to the many other FDA requirements governing the manufacture, distribution, and marketing of devices. As mentioned herein, Defendant had a duty to print on the label and marketing of the Cartiva implant all relevant warnings, precautions, side effects, instructions for use and contraindications and has failed to issue any warnings beyond the generalizations provided in the label; and,
- d. Failed to comply with the requirements of 21 U.S.C. § 360i which provides a device manufacturer shall report to the FDA when the manufacturer receives or otherwise becomes aware of information that reasonably suggests that one of its marketed devices may have caused or contributed to a death

or serious injury, or has malfunctioned and that such device or a similar device marketed by the manufacturer would be likely to cause or contribute to a death or serious injury if the malfunction were to recur. As mentioned herein, Defendant has knowledge that failure rates are higher than reported to the FDA, yet Defendant has taken no action to protect the public, including Plaintiff, from harm caused by the defective Cartiva implant; and,

- e. Defendant has failed to comply with 21 U.S.C. § 360l which required Defendant to submit a surveillance plan for its device once commercial distribution began to detect adverse health events to the public. Instead, Defendant has relied solely on the Motion Study to continue with commercial distribution ignoring the adverse event reports and other studies correlating findings the failure rate is 6-7 times higher than reported by Defendant.

146. As a direct and proximate result of Defendant's violations of one or more of these federal statutory and regulatory standards of care, Plaintiff had a Cartiva implanted using Cartiva instruments and it failed, and such failure directly caused and/or contributed to the severe and permanent injuries sustained and endured by Plaintiff as defined in 21 C.F.R. 803.3. As a direct result, Plaintiff endured suffering, including, but not limited to, recurrent dislocations and subluxations with swelling, toe enlargement, and has required additional and debilitating surgeries and has incurred significant medical expenses in the past and will incur additional medical expenses in the future; physical pain and suffering, both past and future; mental anguish and emotional distress, both past and future, including, but not limited to, annoyance and aggravation.

147. This cause of action is based entirely on the contention that Defendant violated federal safety statutes and regulations. Plaintiff does not bring the underlying action as an implied statutory cause of action, but rather they are pursuing parallel state common law claims based upon Defendant's violations of the applicable federal regulations.

148. The cause of action set forth in this Claim for Relief is not preempted by 21 U.S.C. §306(k) because the violations alleged are all based on an exclusively federal statutory and regulatory set of requirements which include no “requirement, which is different from, or in addition to, any requirement applicable under” the Act and regulations promulgated thereunder. See; *Bausch v. Stryker*, 630 F.3d 546, 556 (7th Cir. 2010) (claims for negligence and strict products liability relating to a Class III medical device were not expressly preempted by federal law to the extent they were based on the defendants’ violations of federal law). As such, the claims set forth herein contain requirements that are parallel to the Act and regulations promulgated thereunder.

149. As a direct and proximate result of Defendant’s aforementioned actions, Plaintiff prays for judgment against Defendant in an amount in excess of Seventy-Five Thousand Dollars (\$75,000.00).

COUNT IV
STATE LAW AND COMMON LAW CLAIMS OF PRODUCT LIABILITY AND NEGLIGENCE FOR CLASS II DEVICES/CLASS III DEVICES

150. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

151. The Cartiva implant and corresponding Cartiva instruments used on Plaintiff were designed, manufactured and distributed by Defendant and placed into the stream of interstate commerce by Defendant.

152. Said components were defective in design and/or manufacture. Said defects existed when the components left the hands of Defendant making the components unreasonably dangerous beyond the contemplation of the ordinary user.

153. Defendant further breached applicable implied and express warranties,

including warranties of merchantability and fitness for a particular purpose.

154. Further, Defendant failed to provide appropriate warnings regarding the potential dangers associated with the use of said components, including warnings regarding the risk of migration of Cartiva implant and shrinkage of the Cartiva SCI, such as was experienced by Plaintiff.

155. As a direct and proximate result of the design and/or manufacturing defects, failure to warn and breach of express and implied warranties related to Defendant's Cartiva implant and corresponding instruments designed, manufactured, distributed, sold and/or placed into the stream of commerce by the Defendant, Plaintiff suffered severe and permanent injuries, including, but not limited to, scarring and disfigurement, pain and suffering and has required additional and debilitating surgeries and has incurred significant medical expenses in the past and will incur additional medical expenses in the future; physical pain and suffering, both past and future; mental anguish and emotional distress, both past and future, including, but not limited to, annoyance and aggravation; and has been damaged in an amount in excess of Seventy Five Thousand Dollars (\$75,000.00).

156. As a direct and proximate result of the willful, wanton, intentional acts, reckless and/or the willful, wanton, intentional acts, reckless and/or the willful, wanton, intentional and reckless failures to act by Defendant, Plaintiff suffered the aforesaid damages and, as such, Plaintiff demands that punitive damages be awarded against Defendant.

COUNT V
BREACH OF EXPRESS WARRANTY

157. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

158. Defendant knew that its Cartiva implant had problems, including but not limited to shrinkage and migration out of joint space into the bone. Defendant advertised Cartiva implants as a non-invasive procedure, designed to reduce quickly restore toe mobility with a simple procedure. None of Defendant's advertising, marketing, or informational materials to the Plaintiff mentioned that Cartiva had the ability to cause a condition that results in a permanent disfigurement to the body that can only be resolved through invasive surgeries resulting in the opposite effect of the device's advertised purpose.

159. Plaintiff relied on the skill and judgment of the Defendant that the device was adequately tested and rendered safe to use for its intended purpose.

160. Plaintiff became interested in and underwent the Cartiva implant procedure based on the Defendants' representation about the procedure.

161. Because of the innate defective nature of the Cartiva implant, Plaintiff and the individuals performing the Cartiva implant procedure on Plaintiff, through the use of reasonable care could not have discovered the defective nature of the Cartiva device or its perceived dangers.

162. As the direct and proximate result of Defendant's conduct, Plaintiff sustained serious injuries that were directly caused by the defective, unsafe, and unreasonably dangerous Cartiva implant that could not safely be used for the purpose for which it was marketed, advertised, promoted and intended.

163. As the direct and proximate result of Defendant's wrongful conduct, Plaintiff suffered and continue to suffer economic losses, emotional distress, permanent disfigurement, physical pain, mental anguish, diminished enjoyment of life and future medical expenses.

COUNT VI

BREACH OF IMPLIED WARRANTY

164. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

165. At all times mentioned herein, Defendant manufactured, compounded, portrayed, distributed, recommended, merchandized, advertised, promoted and sold its Cartiva implant and instruments.

166. At the time Defendant marketed, sold, and distributed its Cartiva implant and instruments to be used on Plaintiff, Defendant knew of the use for which its Cartiva devices were intended and impliedly warranted the product to be of merchantable quality and safe and fit for such use.

167. Defendant impliedly represented and warranted to the users of its Cartiva devices and/or their physicians, and/or healthcare providers, and/or the FDA that its Cartiva devices were safe and of merchantable quality and fit for the ordinary purpose for which said products were to be used.

168. That said representations and warranties aforementioned were false, misleading, and inaccurate in that its Cartiva devices were unsafe, unreasonably dangerous, improper, not of merchantable quality, and defective.

169. Plaintiff and/or members of the medical community and/or healthcare professionals did rely on said implied warranties of merchantability and fitness for a particular use and purpose.

170. Plaintiff and/or his physicians and/or healthcare professionals reasonably relied upon the skill and judgment of the Defendant as to whether its Cartiva devices were of merchantable quality and safe and fit for its intended use.

171. Defendant's Cartiva devices were injected into the stream of commerce by Defendant in a defective, unsafe, and inherently dangerous condition and the products and materials were expected to and did reach users, handlers, and persons coming into contact with said products without substantial change in the condition in which they were sold.

172. Defendant herein breached the aforesaid implied warranties, as its Cartiva devices were neither merchantable nor fit for their intended purposes and uses.

173. By reason of the foregoing Plaintiff has experienced and continues to experience, serious and dangerous side effects including but not limited to, mobility problems and disability, as well as other severe and personal injuries which are permanent and lasting in nature, physical pain and mental anguish, including diminished enjoyment of life, as well as the need for lifelong medical treatment, monitoring and/or medications.

174. As a result of the foregoing acts and omissions Plaintiff requires and/or will require more health care and services and did incur medical, health, incidental and related expenses. Plaintiff is informed and believes and further alleges that Plaintiff will in the future be required to obtain further medical and/or hospital care, attention, and services.

COUNT VII
FAILURE TO WARN

175. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

176. Defendant is, and at all times mentioned in this Complaint was, engaged in the business of designing, manufacturing, assembling, and selling a medical device product known as Cartiva implant devices with the purpose of gaining profits from the distribution thereof.

177. Defendant directly or through its agents, apparent agents, servants, or employees designed, manufactured, tested, marketed, and commercially distributed the Cartiva SCI system

that was used on Plaintiff.

178. Defendant knew that its Cartiva devices were unreasonably dangerous, unsafe, and/or defective and could cause harm to those who used it, including Plaintiff.

179. Defendant knew that implant migration into the bone was not preventable and is unavoidable if undergoing the Cartiva SCI procedure.

180. Defendant had superior knowledge about implant migration because it was in possession and had access to facts and information about the condition that was not available to anyone else. As the manufacturer of the device, Defendant was a centralized hub of information about the device's adverse effects, including migration. It had received thousands of reports of users developing the condition, had access to those person's medical records and information regarding diagnosis, treatment, and occurrence rate, which it did not disclose to the medical community.

181. Defendant had a duty to provide adequate warnings about implant shrinkage and migration, a dangerous adverse effect of its Cartiva SCI system, to Plaintiff's provider.

182. Defendant failed to provide adequate warnings to Plaintiff's provider because the language used by Defendants to describe risks in its training materials:

- a. Inaccurate in content and ambiguous in manner of expression;
- b. Did not adequately inform the providers about a condition which is: 1) unfamiliar to the medical community, 2) is only associated with the Cartiva device, and 3) about which Defendant had superior knowledge;
- c. Creatively used insufficient and vague language that did not provide enough specificity about the condition, which was necessary for the Cartiva providers to know about the risks of using the device;
- d. Misrepresented facts about the adverse effect;

- e. Did not use concrete terms like “shrinkage” and “implant migration” to describe the risks;
- f. Did not warn that it is likely that multiple surgeries may be necessary to remove and/or correct a failed Cartiva SCI;
- g. Did not disclose that Cartiva implant failure can cause permanent nerve damage and deformity.

183. Defendant is liable for Plaintiff’s damages because its product was defective due to its failure to adequately warn Cartiva SCI providers about the danger of the Cartiva Implant system.

184. As the direct and proximate result of Defendant’s wrongful conduct, Plaintiff suffered and continue to suffer economic losses, emotional distress, permanent disfigurement, physical pain, mental anguish, diminished enjoyment of life and future medical expenses.

COUNT VIII
PUNITIVE/EXEMPLARY DAMAGES

185. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein.

186. Defendant’s conduct in deceiving Cartiva system providers and/or convincing providers to participate in the scheme, in not informing Plaintiff of the seriousness, permanency, and frequency of implant shrinkage and migration, in concealing material information regarding the serious adverse effect of the Cartiva implant, and in creating a system by which consumers did not have fair access to important information about Cartiva, was so reckless or wanting in care that it constituted a conscious disregard or indifference to the life, safety, or rights of persons exposed to such conduct.

187. Defendant, as a corporation, actively and knowingly participated in the dissemination of misrepresentations and concealment of material information related to implant

shrinkage and migration and its Cartiva SCI implant system.

188. Defendant and its agent's malicious and fraudulent conduct must be punished to deter future harm to others. Therefore, exemplary damages are appropriate under the circumstances.

PRAYER FOR RELIEF

189. Plaintiff incorporates by reference all preceding paragraphs of this Complaint as if fully set forth herein. and further prays:

190. So far as the law and this Court allows, Plaintiff demands judgment against Defendant on each count as follows:

- A. All available compensatory damages for the described losses with respect to each cause of action;
- B. Past and future medical expenses, as well as the cost associated with past and future life care;
- C. Past and future lost wages and loss of earning capacity;
- D. Past and future emotional distress.
- E. Consequential damages;
- F. All available noneconomic damages, including without limitation pain, suffering, and loss of enjoyment of life;
- G. Disgorgement of profits obtained through unjust enrichment;
- H. Restitution;
- I. Punitive damages with respect to each cause of action;
- J. Treble damages for Defendant's violations of the Act;
- K. Reasonable attorneys' fees where recoverable;
- L. Costs of this action;
- M. Pre-judgment and all other interest recoverable; and

- N. Such other additional, further, and general relief as Plaintiff may be entitled to in law or in equity as justice so requires.

DEMAND FOR JURY TRIAL

Plaintiff hereby demands a trial by jury on all issues raised in this Complaint.

Dated: March 6, 2026

Respectfully submitted,

/s/ Ken Moll

INSTRUCTIONS FOR ATTORNEYS COMPLETING CIVIL COVER SHEET FORM JS 44

Authority For Civil Cover Sheet

The JS 44 civil cover sheet and the information contained herein neither replaces nor supplements the filings and service of pleading or other papers as required by law, except as provided by local rules of court. This form, approved by the Judicial Conference of the United States in September 1974, is required for the use of the Clerk of Court for the purpose of initiating the civil docket sheet. Consequently, a civil cover sheet is submitted to the Clerk of Court for each civil complaint filed. The attorney filing a case should complete the form as follows:

- I.(a) Plaintiffs-Defendants.** Enter names (last, first, middle initial) of plaintiff and defendant. If the plaintiff or defendant is a government agency, use only the full name or standard abbreviations. If the plaintiff or defendant is an official within a government agency, identify first the agency and then the official, giving both name and title.
- (b) County of Residence.** For each civil case filed, except U.S. plaintiff cases, enter the name of the county where the first listed plaintiff resides at the time of filing. In U.S. plaintiff cases, enter the name of the county in which the first listed defendant resides at the time of filing. (NOTE: In land condemnation cases, the county of residence of the "defendant" is the location of the tract of land involved.)
- (c) Attorneys.** Enter the firm name, address, telephone number, and attorney of record. If there are several attorneys, list them on an attachment, noting in this section "(see attachment)".
- II. Jurisdiction.** The basis of jurisdiction is set forth under Rule 8(a), F.R.Cv.P., which requires that jurisdictions be shown in pleadings. Place an "X" in one of the boxes. If there is more than one basis of jurisdiction, precedence is given in the order shown below.
United States plaintiff. (1) Jurisdiction based on 28 U.S.C. 1345 and 1348. Suits by agencies and officers of the United States are included here.
United States defendant. (2) When the plaintiff is suing the United States, its officers or agencies, place an "X" in this box.
Federal question. (3) This refers to suits under 28 U.S.C. 1331, where jurisdiction arises under the Constitution of the United States, an amendment to the Constitution, an act of Congress or a treaty of the United States. In cases where the U.S. is a party, the U.S. plaintiff or defendant code takes precedence, and box 1 or 2 should be marked.
Diversity of citizenship. (4) This refers to suits under 28 U.S.C. 1332, where parties are citizens of different states. When Box 4 is checked, the citizenship of the different parties must be checked. (See Section III below; **NOTE: federal question actions take precedence over diversity cases.**)
- III. Residence (citizenship) of Principal Parties.** This section of the JS 44 is to be completed if diversity of citizenship was indicated above. Mark this section for each principal party.
- IV. Nature of Suit.** Place an "X" in the appropriate box. If there are multiple nature of suit codes associated with the case, pick the nature of suit code that is most applicable. Click here for: [Nature of Suit Code Descriptions](#).
- V. Origin.** Place an "X" in one of the seven boxes.
Original Proceedings. (1) Cases which originate in the United States district courts.
Removed from State Court. (2) Proceedings initiated in state courts may be removed to the district courts under Title 28 U.S.C., Section 1441. When the petition for removal is granted, check this box.
Remanded from Appellate Court. (3) Check this box for cases remanded to the district court for further action. Use the date of remand as the filing date.
Reinstated or Reopened. (4) Check this box for cases reinstated or reopened in the district court. Use the reopening date as the filing date.
Transferred from Another District. (5) For cases transferred under Title 28 U.S.C. Section 1404(a). Do not use this for within district transfers or multidistrict litigation transfers.
Multidistrict Litigation – Transfer. (6) Check this box when a multidistrict case is transferred into the district under authority of Title 28 U.S.C. Section 1407.
Multidistrict Litigation – Direct File. (8) Check this box when a multidistrict case is filed in the same district as the Master MDL docket.
PLEASE NOTE THAT THERE IS NOT AN ORIGIN CODE 7. Origin Code 7 was used for historical records and is no longer relevant due to changes in statute.
- VI. Cause of Action.** Report the civil statute directly related to the cause of action and give a brief description of the cause. **Do not cite jurisdictional statutes unless diversity.** Example: U.S. Civil Statute: 47 USC 553 Brief Description: Unauthorized reception of cable service
- VII. Requested in Complaint.** Class Action. Place an "X" in this box if you are filing a class action under Rule 23, F.R.Cv.P.
Demand. In this space enter the actual dollar amount being demanded or indicate other demand, such as a preliminary injunction.
Jury Demand. Check the appropriate box to indicate whether or not a jury is being demanded.
- VIII. Related Cases.** This section of the JS 44 is used to reference related pending cases, if any. If there are related pending cases, insert the docket numbers and the corresponding judge names for such cases.

Date and Attorney Signature. Date and sign the civil cover sheet.
